## FTDI USB Driver and Mavericks

This instruction affects everyone using Mac OS 10.9 Mavericks and Little Weaver or Compu-Dobby IV. With Mac OS 10.9 Mavericks, Apple has broken the FTDI USB driver that is used by Compu-Dobby IV and Little Weaver. Fortunately, there is an easy fix. The following utility will disable the Mac driver and allow the FTDI driver to work properly.

1. Download & install the FtdiDriverControl utility at ([click here to download](#)).
2. Go to Downloads with a Finder window.
  - a. Click on Downloads in the Dock.
  - b. or, Click on Downloads in a Finder window.
3. Right click on FtdiDriverControl.app. Choose Open on the menu.
4. When the confirmation dialog appears, continue to open the app
5. Click the big button in the center of the dialog box:

Type in your admin password to allow the action. You must be logged into OS X as an admin user (verify this from System Preferences > Users & Groups), and you must have a non-blank password configured (see <http://support.apple.com/kb/PH13861>). Exit the program. The USB port to your loom should now be accessible.
