Little Weaver Warp Advance Handle Instructions

1. **Clip On** – Snap the handle onto the cloth storage beam with the peg facing the gear. This may require some force and will make a loud “snap” when clipped on.

2. **Advance the Warp** – Slide the handle towards the gear so that the peg aligns with the gear teeth. Pull handle down to advance the warp.

3. **Handle Position While Beating** – Place the handle either locked on the gear or near your warp threads to avoid collision with the beater arm.
