Little Weaver & Compu-Dobby® USB Driver Fix for Mac OS El Capitan

This instruction affects everyone using Mac OS 10.11 or OS X El Capitan, AVLDrive, AVLAdmin and/or AVLUpdate with Little Weaver, Compu-Dobby IV and Compu-Dobby ver.4.5. Apple has broken the USB driver used by these looms. Fortunately, there is an easy fix. The following procedure disables the Mac driver and allows the AVL-supplied driver to work properly.

- 1) Download the following from the FTDI website:
http://www.ftdichip.com/Drivers/D2XX/MacOSX/D2xxHelper_v2.0.0.pkg
- 2) Install it on your Mac.
- 3) Reboot your Mac.
- 4) Reboot your loom and then wait 1 minute after the solenoids finish the self-test.
- 5) Connect through AVLDrive and the USB cable.

Type in your admin password to allow the action. You must be logged into OS X as an admin user (verify this from System Preferences > Users & Groups), and you must have a non-blank password configured (see <http://support.apple.com/kb/PH13861>).
